

The 360 citizens and one organization listed below mailed a pre-printed postcard in support of the following Sierra Club statement:

Dear Director Gerry O'Keefe and Chair Martha Kongsgaard,

Severe flooding, summer drought and low steam flows, sea level rise, and stronger storms - these climate change impacts threaten the health of Puget Sound and our region's way of life.

To mitigate these impacts, we call on you to strongly discourage conversion of working farms and forests into impervious surfaces, limit development in floodplains and critical floodplain habitat, and utilize ecosystem services and natural areas as buffers to help filter toxic storm-water to address some of the worst impacts of climate change.

The 669 citizens listed below sent a form email in support of the following Sierra Club statement (or portion thereof). Individual comments added to the form letter are included after the list of names.

As we experience increases in water temperature, altered river and stream flows, loss of near-shore inter-tidal zones, increased flooding and massive changes in precipitation, we realize that climate change is upon us.

It is essential that the Puget Sound Action Agenda Revision takes climate change impacts into account, preparing our community for the changes we are already feeling as well as the scenarios scientists are warning us about. To prepare for climate change, we strongly suggest viewing all relevant Puget Sound restoration and protection strategies and actions through the "lens" of a changing climate. We must insist that decision makers consider the merit and value of every strategy and near-term action in a real-world context, the context of a changing climate.

One way to accomplish this is to improve or amend the Prioritization Framework laid out in the draft Action Agenda so that the Prioritization Framework takes climate change into account. Thus, adding a climate-change lens to the Prioritization Framework would appropriately value near-term actions that expand opportunities for climate-adaptation, CO2 mitigation, or increase climate resilience. Actions that expand protected areas, limit "non-climate" stressors, facilitate climate-smart management, improve our reliance on natural systems or help mitigate climate change through carbon sequestration should receive special added priority value, as these are strategic tactics we recommend for confronting climate change.

Thank you for considering my comments.

1. Please add "climate disruption" to the Prioritization Framework of the Puget Action Agenda.
2. The most important thing that the Puget Sound Partnership can do for the health of the Sound is to prioritize actions that limit global warming. Increased CO2 and other global warming gasses in the atmosphere will cause increased oceans acidification and other climate change effects that will be disastrous for the health of the Sound.
3. We have to take actions to save the future.
4. BE THE EXAMPLE OTHER STATES AND COMMUNITIES FOLLOW.
5. We live in a special place. The one thing that makes Washington so special is that we have been able to protect our natural assets. We have kept them natural. I was just to the Galapagos Islands with several Americans. They were awed by the special state of Galapagos. My favorite part of the

trip is that I realized how special our Puget Sound area is compared with the rest of the country. We are special. So help us stay that way.

6. I'm sure that you recognize that...We must insist that decision makers consider the high priority of Indigenous Peoples' right to take fish for living...
7. We need to look at all sides of what is happening. If one part of the problem is ignored then the solution will never be achieved. This changing climate affects all: the waters, the salmon, the bears, the bees, the flowers and trees, the birds, the tiniest and biggest bugs and creatures the whales and all ocean life and Us, people. Educate all of us on better daily living choices and ways of living to help restore and heal our nature and earth.
8. It's already later than it should be to act on these changes. Please do everything possible to look after Puget Sound.
9. It is essential that the Puget Sound Action Agenda Revision amend the Prioritization Framework to take climate change impacts into account. Decision makers must be held accountable for choices that do not take into account or strive to ameliorate conditions resulting from a changing climate. I live and vote in Whatcom County. I have been working for almost a year now to stop the proposed Gateway Pacific Terminal Project to transport huge amounts of coal by rail through Bellingham and to ship it in massive cargo ships to China to be burned. This project is just such a one that would very adversely impact the Puget Sound and any decision makers that have a part in assenting to it should be prosecuted for negligence: they will be guilty of health impacts from the burning and shipping of coal that actually kill people and they will be guilty of contributing to global warming on such a massive scale that we will never be able to turn back.
10. We need to consider climate change and the changes that will profoundly change water systems, and people along those systems as well as restoration of puget sound.
11. It does not matter who or what is responsible for the change in our climate. We should be factoring in climate change impacts relevant to Puget Sound restoration and protection strategies. Decision makers must consider the merit and value of every strategy and near-term action in a real-world context...Please consider all the options.
12. Since the political power in Washington won't acknowledge this problem in any significant way it falls to the local level to act. While we can't change the weather (much) we do have to deal with what is coming and change is happening now. We need to be working in as many possitive ways to protect what we can. Changes in our individual behavior from driving less to composting and recycling do help but we need local agencies to act as well.
13. Let's get going before it's too late. Time is precious, we all know that. People and life over money - let's go.
14. I stand with the Sierra Club in their message that we must prepare in as many ways as possible for the coming changes to climate. Please plan in any way you can wisely determine will support our ecosystems. Thank you

15. I stand with the Sierra Club in their message that we must prepare in as many ways as possible for the coming changes to climate. Please plan in any way you can wisely determine will support our ecosystems. Thank you
16. Climate change affects all of us.
17. Prevention/preparation is the cheapest and most effective approach. Anticipation, not just response to fix the present problem is essential, thus the Puget Sound Action Agenda Revision. We need to approach all relevant Puget Sound restoration and protection strategies and actions through the "lens" of a changing climate. Let science and best projections guide the approach. to facilitate climate-smart management.
18. Protection needs to begin BEFORE there's a real problem.
19. We have the amazing good fortune to live in such a rich, life sustaining environment. We must employ our most astute intention, clarity, and care in helping our natural habitat make it through the changes that are upon us!
20. Our weather in Puget Sound has changed over the almost fifty years I have lived here. The future will bring more changes so snow pack, rainfall will be affected. We need to plan ahead.
21. I am terrified by what scientists are saying about climate change in Puget sound...PLEASE HELP!
22. Along the lines of the carbon sequestration of natural systems, it should be noted that the Pacific Northwest's unique temperate conifer forests are the world's tallest trees. This means larger biomass and longer lived carbon sequestrers. We must strive to protect all forests, large and small, as the valuable asset they are.
23. Please protect our natural resources and help minimize the effects of climate change we feel, by conserving natural areas, protecting rivers and green zones and saying "no" to energy initiatives that are outdated or accelerate global warming in the Puget Sound and North West.
24. As one involved with many civic activities, I rely on those folk that have a far greater knowledge than I about The Sound. A primary reason I migrated here is the beauty and life forms in the sound. It is time to take a non corporate benefit aspect of protection of The Sound. Proper reporting and follow up by citizens must be a vital part of any long range efforts. Respectfully!
25. This is a very impotrant issue for our family andthenPuget Sound as a whole-- for now and for future generations;
26. Combatting the large amounts of methane and particulates added to our air every year helps both perspectives.
27. 1990's Washington considered prime outdoor state. 2000's Drastic reduction yearly on result of Salmon fishing, example... 2010's Almost non existance of fishes in lots of popular area..

bottom feeding seafood caused many increase in human cancer level. Result from the earlier accumulation of raw sewage dump on Puget Sound water. Determine yourself, the reduction and no more outdoor sea creatures around Puget Sound is noticeable in yearly outcome. Just consider if outdoor supreme creatures like fish, crustesians are near gone and also bring alert danger of cancer by all the dumpage of sewer around the Puget sound. The rest of other negative factore is icing on the cake. It's for your own future water enjoyment and preventing the inevitable of destroying Puget Sound by one by one.... It;s no brainer. Do something or extinct, including yourself later.....work smarter now, or regret.....

28. Our agricultural system is closely linked with the river systems that feed the Puget Sound. Thus, caring for the Puget Sound, also ensures a safe, plentiful and local food supply for citizens now and in the future. We count on the Puget Sound for the rich source of wildlife, fish that we eat, irrigation and fertilization for the soil that supports the plants we eat. .
29. I am a third generation Washingtonian who treasures the unique gift from nature that we in the Puget Sound area have enjoyed for so many years. We owe it to our children and to their children to protect and preserve that gift for them to enjoy as we have.
30. I fully endorse this message and also the Puget Sound Environmental Caucus comment letter.
31. For the sake of our children and grandchildren, and this place that we love, please take action now.
32. For the benefit of our Children's Children's Children...
33. For the benefit of our Children's Children's Children...
34. Global climate change may be debated, but not by those who are actually climatologists. <http://explorations.ucsd.edu/in-the-news-now/2012/in-the-news-now-38-climate-researchers-respond-to-a-wall-street-journal-opinion-piece/> It's mostly likely coming. Despite what the Wall Street Journal may publish. Because it is likely, it is essential that the Puget Sound Action Agenda Revision takes climate change impacts into account, preparing our community for the changes we are already feeling as well as the scenarios scientists are warning us about. To prepare for climate change, we strongly suggest viewing all relevant Puget Sound restoration and protection strategies and actions through the "lens" of a changing climate. We must insist that decision makers consider the merit and value of every strategy and near-term action in a real-world context, the context of a changing climate.
35. As long-time members of People for Puget Sound we fully support action to prioritize restoration and protection strategies with consideration for climate change.
36. As long-time members of People for Puget Sound we fully support action to prioritize restoration and protection strategies with consideration for climate change.
